DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lattimore et al (5,831,896) in view of Rapp (4,189,785).

Lattimore et al disclose a five transistor memory cell device having all the features as claimed except for a voltage of $V_{ss} + \Delta V$ is connected to memory cell in writing "1" data mode. However, Rapp (Fig.3) teaches a voltage of $V_{ss} + \Delta V$ is connected to memory cell in writing "1" data mode (a V_{guard} (2 volts) or a V_{zero} (1 volt) is applied to memory cell). Therefore, it would have been obvious to one of ordinary skill in the art at the time this invention was made to modify Lattimore et al by connecting the memory cell to a voltage of $V_{ss} + \Delta V$ (1 or 2 volts) such as taught by Rapp in order to prevent the write disturbing to adjacent memory cells.
